Compressed Air Purification Specialist

Compressed Breathing Air quality testing is there to protect you and your employees.

Annual compressed breathing air testing is necessary to ensure that it meets the Australian standard (AS1715:2009), in some states an annual inspection is a requirement of Worksafe.

It is also recommended that any filters used in the breathing air system are regularly checked and maintained in good operating conditions - if you have any concerns about your breathing air filtration please ask us - we are here to help!

We undertake a comprehensive test onsite recording levels of Oxygen, Carbon Monoxide, Carbon Dioxide, Oil, Odour Temperature, Relative Humidity and Water Vapour.

If the test passes to Australian standard (AS1715:2009) a compliance certificate is issued.
